Product details available in the products database at www.blucher.com

For the owner/user:

BLÜCHER® Channel drainage channel or kitchen channel in stainless steel AISI 316L, alternatively AISI 304 has been installed.

Prior to starting use:

- Check that the channel has been cleaned leaving no concrete spills etc.
- Check that the water trap has been installed. If a filter basket is to be included, check also that this has been installed.
- In vinyl floors check that the clamping ring has been fixed securely.
- Check that the type of grating chosen is suitable for the weight load required.

Normal operation:

BLÜCHER® Channel stainless steel channel or kitchen channel can be fitted with a P water trap or a removable water trap with excellent self-cleansing properties. The P water trap is embedded in concrete during installation of the channel. The removable water trap can easily be removed. In case of many impurities it may be necessary to clean the water trap at appropriate intervals.

KEEPING UP THE FLOW

Cleaning:

- Remove grating, filter basket and water trap.
- Clean water trap, filter basket and grating with detergent as necessary.
- Make sure that lubricant has been applied to the sealing ring of the water trap.
Install the water trap applying a light pressure and twisting the water trap down to the stop ring in the drain. To avoid bad odours, make sure that the sealing ring of the water trap fits tightly to the drain.
- Install filter basket and grating.
- Apply water to the water trap
